VIPERCON ELECTRIC CABLE

PVC Sheathed, Unarmoured Power Cables - 0.6/1kV

● Applications

WW VIPERCON 0.6/1kV PVC sheathed power cables are mostly used for buildings, industrial plants, gantry wiring, and road transport depots where not subject to mechanical damage. The cables are suitable for installation indoor/outdoor, enclosed in conduit, and in underground duct.

● Configuration

Conductor:	plain annealed copper or plain aluminium of the type specified in AS/NZS 1125. Insulation: 1.5mm ² ~ 10mm ² , polyvinylchloride compound PVC V90.
Laying-up:	16mm ² and above, cross-linked polyethylene compound XLPE
	cores are laid up together with a right-hand direction of lay, with non-hygroscopic filler where necessary to form a substantially compact and circular cross-section core assembly.
Sheath:	The laid-up core is sheathed with a continuous flame retardant polyvinylchloride compound PVC 5V-90

Core identification

2C+E cable:	Phase core colour: Red,	Neutral core colour: Black	Earth core colour: Green/Yellow
3C+E cable:	Phase core colour: Red, White, and Blue		Earth core colour: Green/Yellow
4C+E cable:	Phase core colour: Red, White, and Blue	Neutral core colour: Black	Earth core colour: Green/Yellow
Sheath colour:		Standard - Orange Optional - Black (Ultraviolet radiation stabilised)	

● Technical data

Rated voltage:	0.6 / 1 kV
Conductor operating range:	PVC insulated, -25°C ~ 75°C, MAX 90°C, short circuit temperature 160°C for 5 sec XLPE insulated, -40°C ~ 90°C, short circuit temperature 250°C for 5 sec
Temperature at surface:	In operation, -25°C ~ 90°C
Minimum ambient temp:	0°C, after installation and only when cable is in a fixed position
Minimum bending radius:	Stranded conductors 9 x cable O.D during installation 6 x cable O.D after installation Compacted conductors 12 x cable O.D during installation 8 x cable O.D after installation

--The maximum conductor temperatures specified are based on the properties of the insulation material but in practice may need to be derated to take account of joints and terminations and environmental conditions.

--When installed in tunnels, they should be fixed on brackets and cannot bear large pulling tension or pressure.

--Thermoplastic PVC V90 insulation is subject to deformation at temperatures above 75°C.

VIPERCON ELECTRIC CABLE

PVC Sheathed, Unarmoured Control Cables - 0.6/1kV

Applications

WW VIPERCON 0.6/1kV PVC sheathed multi-core control cables are mostly used for control circuit in buildings, industrial plants, gantry wiring, and road transport depots where not subject to mechanical damage. The cables are suitable for installation indoor/outdoor, enclosed in conduit, and in underground duct .

Configuration

Conductor:	plain annealed copper (class 2 strands) of the type specified in AS/NZS 1125.
Insulation:	polyvinylchloride compound PVC V90.
Laying-up:	cores are laid up together with a right-hand direction of lay, with non-hygroscopic filler where necessary to form a substantially compact and circular cross-section core assembly.
Sheath:	the laid-up core is sheathed with a continuous flame retardant polyvinylchloride compound PVC 5V-90

Core identification

Core:	Active core: White core with black numbering
	Earth core: Green/Yellow
Sheath colour:	Standard - Black (Ultraviolet radiation stabilised)
	Optional - Orange

Technical data

Rated voltage:	0.6 / 1 kV
Conductor operating range:	-25°C ~ 75°C, MAX 90°C, short circuit temperature 160°C for 5 sec
Temperature at surface:	In operation, -25°C ~ 90°C
Minimum ambient temp:	0°C after installation and only when cable is in a fixed position
Minimum bending radius:	9 x cable O.D during installation 6 x cable O.D after installation

--The maximum conductor temperatures specified are based on the properties of the insulation material but in practice may need to be derated to take account of joints and terminations and environmental conditions.

--When installed in tunnels, they should be fixed on brackets and cannot bear large pulling tension or pressure.

--Thermoplastic PVC V90 insulation is subject to deformation at temperatures above 75°C.

World Wire Cables

VIPERCON ELECTRIC CABLE

PVC Sheathed, Steel Wire Armoured Multi-Core Control Cables - 0.6/1kV

● Applications

WW VIPERCON 0.6/1kV armoured multi-core control cables are mostly used for control circuit in buildings, industrial plants, mining and petroleum industry where extra mechanical protection is required. The cables are suitable for installation indoor/outdoor, enclosed in conduit, in underground duct, and buried directly in earth.

● Configuration

Conductor:	plain annealed copper (class 2 strands) of the type specified in AS/NZS 1125.
Insulation:	polyvinylchloride compound PVC V90.
Laying-up:	cores are laid up together with a right-hand direction of lay, with non-hygroscopic filler where necessary to form a substantially compact and circular cross-section core assembly.
Bedding:	flame retardant polyvinylchloride compound PVC 5V-90
Armour:	single layer galvanized (Mild) steel wires helically applied over bedding.
Sheath:	the laid-up core is sheathed with a continuous flame retardant polyvinylchloride compound PVC 5V-90 to AS/NZS 3808.

Core identification

Core:	Active core: White core with black numbering,
	Earth: Green/Yellow
Sheath colour:	Standard - Black (Ultraviolet radiation stabilised)
	Optional - Orange

● Technical data

Rated voltage:	0.6 / 1 kV
Conductor operating range:	-25°C ~ 75°C, MAX 90°C, short circuit temperature 160°C for 5 sec
Temperature at surface:	In operation, -25°C ~ 90°C
Minimum ambient temp:	0°C after installation and only when cable is in a fixed position
Minimum bending radius:	18 x cable O.D during installation 12 x cable O.D after installation

--The maximum conductor temperatures specified are based on the properties of the insulation material but in practice may need to be derated to take account of joints and terminations and environmental conditions.

--When installed in tunnels, they should be fixed on brackets and cannot bear large pulling tension or pressure.

--Thermoplastic PVC V90 insulation is subject to deformation at temperature above 75°C.

World Wire Cables

VIPERCON ELECTRIC CABLE

SDI Power Cable

● Configuration

Conductor: plain annealed copper or plain aluminium (class 2 strands) of the type specified in AS/NZS 1125.
Inner Insulation: cross-linked polyethylene (XLPE).
Outer insulation: flame retardant polyvinyl chloride PVC 5V-90.
Outer Insulation colour: Standard – Black (Ultraviolet radiation stabilised)
Optional – Orange

● Technical data

Rated voltage: 0.6 / 1 kV
Conductor operating temp: - 40°C ~ 90°C, short circuit: 250°C for 5 sec
Minimum bending radius: Stranded conductors 9 x cable O.D during installation
6 x cable O.D after installation

--The maximum conductor temperatures specified are based on the properties of the insulation material but in practice may need to be derated to take account of joints and terminations and environmental conditions.

--The cables should not be flexed when either the ambient or cable temperature is below 0°C

● Standards:

World Wire Cables

VIPERCON ELECTRIC CABLE

Supplementary Technical Information

A. Rated voltage designation

Voltage rating for low voltage power cable is expressed in the form U_0/U (U_m), the voltage designation takes into consideration the fact that the system voltage may vary up to 9.1% from the designated voltage.

0.6/1kV (1.2kV): $U_0 = 0.6\text{kV}$, $U = 1\text{kV}$, $U_m = 1.2\text{kV}$

U_0 is the R.M.S power frequency voltage between phase conductor and earth conductor of the supply system.

U is the R.M.S power frequency voltage between phases conductor of the supply system.

U_m is the maximum R.M.S power frequency voltage between any two phases conductor for which cables are designed. It is the highest voltage that can be sustained under normal operating conditions at any time and at any point in a system. It excludes transient voltage variation due to fault condition and sudden disconnection of large load.

The rated voltage of the cable for a given application shall be suitable for the operating condition in the system.

B. Conductor materials characteristics:

Conductor Type	Conductivity %	Resistivity at 20°C nΩ.m	Density g/cm³	Temperature °C
Copper	100	17.07~17.24	8.92	234.5
Aluminium	61	28.26	2.73	228.1

C. Conductor maximum d.c resistance at 20°C and a.c resistance at 90°C (Multi-core):

Nominal Area mm²	Max. d.c resistance of conductor at 20°C		a.c resistance of conductor at 90°C	
	Copper Ω / km	Aluminium Ω / km	Copper Ω / km	Aluminium Ω / km
1.5	13.6	-	17.3	-
2.5	7.41	-	9.45	-
4	4.61	-	5.88	-
6	3.08	-	3.93	-
10	1.83	-	2.33	-
16	1.15	-	1.47	-
25	0.7270	1.20	0.927	-
35	0.5238	0.8670	0.669	1.11
50	0.3661	0.6061	0.494	0.822
70	0.2604	0.4310	0.343	0.569
95	0.1931	0.3196	0.248	0.411
120	0.1528	0.2529	0.197	0.325
150	0.1222	0.2023	0.160	0.265
185	0.0991	0.1641	0.129	0.212
240	0.0761	0.1260	0.0998	0.162
300	0.0611	0.1012	0.0812	0.131

*Further conductor types and stranding configuration on request. Conductor compacted index is not less than 0.9.

D. Conversion factor for conductor temperatures:

Temperature Rating °C	Conversion Copper	Factor Aluminium
20	1.000	1.000
90	1.275	1.282
105	1.334	1.343
130	1.432	1.443
250	1.904	1.927

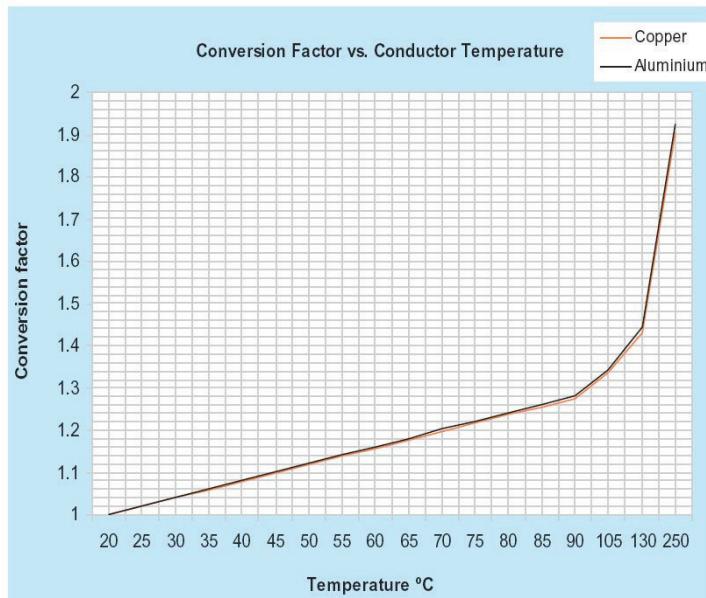

Conversion Example

50 mm² Cable (Copper)

Max d.c resistance at 20°C = 0.3661 Ω / km.

Conversion factor for 50mm² at 90°C = 1.275

Max d.c resistance at 90°C = 0.3661 Ω / km * 1.275 = 0.4668 Ω/km

VIPERCON ELECTRIC CABLE

World Wire Cables

VIPERCON ELECTRIC CABLE

G. Current carrying capacity

The current rating given in this catalogue has been calculated using the method described in IEC 60287 - Calculation of the current rating (All parts), and based on typical Australia installation condition:

- Lay in air: Ambient air temperature 40°C
- Lay in ground: Ambient soil temperature 25°C,
Specific thermal resistivity 1.2 K.m/W, Buried depth 0.75 ~ 0.8m
- Lay in conduits: The current carrying capacity will be reduced by approximate 15 ~ 25%.
- Other conditions: Balance load, Unexposed to the direct sunlight.

Multi - Core cables current rating

Nominal Phase CSA mm ²	Insulated Material	3G(2C+E) - 2 loaded						4G(3C+E) or 5G(3C+N+E) - 3 loaded						Fault Current Rating

VIPERCON ELECTRIC CABLE

H. Current rating factor

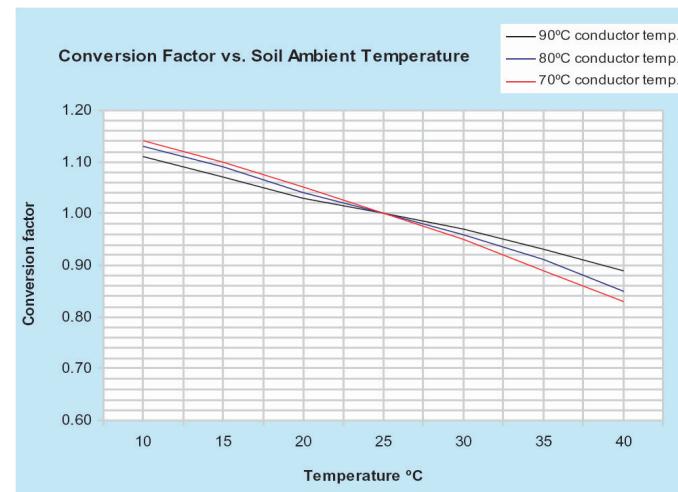

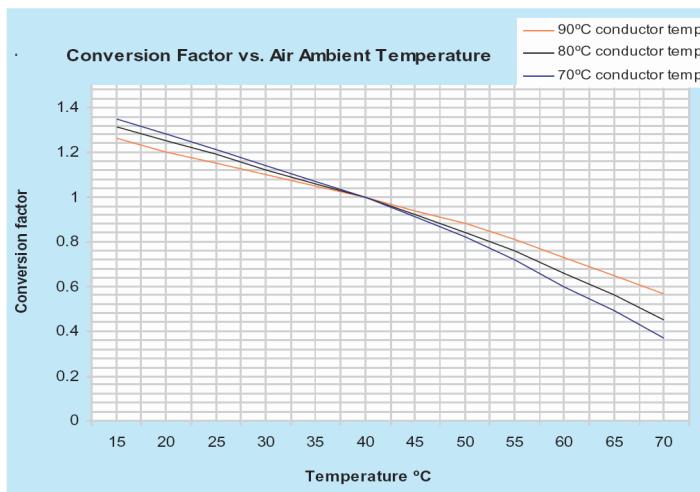

1. Depth of laying rating factor

Nominal Area	Conductor area vs. Depth (Laid direct in ground)							
	0.8m	1m	1.25m	1.5m	1.75m	2m	2.5m	+3m
≤300 mm ²	1	0.98	0.96	0.95	0.94	0.92	0.91	0.90

2. The current carrying capacity of a cable will vary dependent on the installation condition and the cable surrounding condition.

(I) ambient air temperature conversion factor

(II) ambient soil temperature conversion factor

Note: the current rating and the derating factor is referenced from AS/NZS 3008.1, please refer to AS/NZS 3008.1 or AS/NZS 3000 for current rating on other installation condition.

I. Cable testing criterias

The following test will be conducted at manufacturer's work, and testing method is in accordance with AS/NZS 1660

- a. Cable construction test, sample test
- b. Conductor resistance test, routine test
- c. Insulation spark test (6kV a.c)
- d. Cable A.C withstand voltage test (3.5kV a.c /5 min.)
- e. Cable mechanical test, sample test on tensile strength, bending radius
