Underground Mains and Detectable Marking Tape increases safety by indicating the contents of pipes.

Constructed from polyethylene, the tape is rot and fade resistant and is available in any width and length.

Color coded tapes conform to Australian Standards and stretches rather than tearing when hooked by a shovel or backhoe.

Detectable marking tape is available, containing an electronically continuous 0.7mm stainless steel wire trace which has 50% exposure to soil for easy detection.

Standard widths include 100 & 150mm, with standard lengths varying from 50, 100, 250 and 500 meters for non-detectable tape and 100, 250 and 300 meters for detectable marking tape. Non-Standard lengths may require a longer lead time to allow for manufacture.
