

A Sonepar Company

Q: What is this NEW feature available on eBranch?

A: This new feature allows you to create formats for data you wish to export from eBranch, for the following:

- CATALOGS (Pricing data)
- INVOICES
- ORDERS
- ORDER STATUS (Backorders)

Formats can be created to suit the requirements of your specific accounting package. You can also select from our wide range of predefined standard export formats for popular accounting packages. We will introduce additional standardised formats progressively.

You will then be able to export these by either RUN it or Schedule it.

Q: What are the software accounting packages we have already available?

A: Currently we have already predefined and available formats for the following: SimPRO, Fergus, Tradify, Xero, Myob, ServiceM8.

Q: Are you a SimPRO user? What's formats you have available?

A: For simPRO users we have the following pre-defined formats

- Catalogue (Price File)
- Invoices

The only action you will need to take is to either run these formats NOW or SCHEDULE.

NOTE: For simPRO users we are also fully integrated in terms of Catalogues and Invoices. This means you don't need to do any of that retrieval and importing manually. To set up this automation you will need to follow the instructions as per below:

Automate Catalogue (Price File) – [Click here](#)

Automate Invoices – [Click here](#)
